Documentation on how to run the program

To run the C++ file (in Mac).
-Open the source.cpp file using Visual studio
-click on "Terminal"
-click on "Run Build Task"
-select "c/c++" to build and run
-once the program is successfully run, you will see the exec file "Source" in your directory.

To run exec file
- Open the terminal and type the following command
-./Source external_sorting_age.txt
-make sure all the files in the same directory
-once the program runs you will see the sorting in the screen with the name of the sorted output file.
